Technologies

🖥 HTML + 🎨 CSS + JS JS

TS Typescript + ⚛ React

⚛ Redux + ⋯ ReactRouter

Ⓜ MUI + 🎞 FramerMotion

B Bootstrap + ☾ jQuery

Hard skills

Git + BEM + Core Web Vitals + Adaptability + Semantics + Accessibility + CSS-Pre-processors + Chrome Dev Tools + REST + Cross-browser compatibility + Browser API

Soft skills

Responsibility + Perseverance Integrity + Learning ability + Creative thinking + Passion + Problem solving + Cooperation + Openness

Languages

🇷🇺 Russian (Native)

🇬🇧 English (~B2)

🎓 Higher education

Federal state budgetary educational institution of higher education «Kuban state technological university»

09.03.01 «Informatics and Computer Science» Bachelor's degree with honors

2011 – 2015

💼 Experience

Webarchitect.ru
Fullstack Developer

2015 – present time

📝 *Responsible for key tasks in architecture design and team implementation of large projects, developing backend parts using PHP, Yii2, Laravel, MySQL, and CMS Wordpress, as well as implementing complex dynamic frontend logic using React and Redux.*

🏆 *Over a long period of working with the team, many projects have been developed with my leading participation. Some of the largest and most interesting include the regional real estate portal of Krasnodar and a number of specialized digital service platforms, which continue to actively attract users and are currently under support.*

OOO Kuban products (LLC)
Software engineer

09.2022 – present time

📝 *Developed standalone software modules for an accounting system, REST API, and web interface, and performed their integration and support.*

🏆 *Independently developed a site for tracking automotive parts inventory based on CMS Wordpress, React, and Bootstrap, allowing the integration of the transport department and accounting. This site synchronizes data management with 1C configuration, significantly reducing manual work, automating the document workflow, and substantially alleviating the workload of staff.*

ZAO Kuban cable (CJSC)
Software engineer

04.2017 – 09.2022

📝 *Developed a range of specialized programs for automated production accounting, financial accounting, and the recording and processing of data from industrial electrical equipment.*

🏆 *Made a significant contribution to the automation of accounting and engineering calculations by developing a suite of auxiliary applications and integration programs using 1C, .NET Framework (C#), Web, and Excel VBA technologies. These efforts have been repeatedly highly praised by the management.*

Municipality administration
Information technology sector specialist

06.2015 – 04.2017

📝 *Maintenance of the official information website of the administration.*

🏆 *As part of a team, developed and implemented a custom Wordpress theme that provides specialized administration and automation tools for document management, news bulletins, and more.*

👤 About me

During my 8-year professional career, I have participated in the implementation of numerous desktop and backend projects. However, I have always had a special interest in UI and frontend development.

With experience, I have become familiar with various common techniques and methodologies, gaining perspectives from different roles, including client, designer, and full-stack developer.

I always strive to find effective solutions, relying on the experience of generations, OOP, design patterns, and common sense.

I continue to maintain healthy enthusiasm and seek interesting opportunities for personal professional growth and development.
